

EcoCraft Homes Buy Direct Program

Welcome to the future of new home construction:

**ECOCRAFT HOMES INTRODUCES IT'S "BUY DIRECT" PROGRAM
WE BUILD THE HOUSE, YOU SAVE MONEY AND OVERSEE THE PROJECT!**

At EcoCraft Homes, we use modern modular construction to build energy efficient, Eco-friendly, and healthy custom homes for our customers and their families at a great value. As we have grown, we have realized that there is a huge demand for Eco-friendly homes outside of our market, and that we do not have the resources to be the General Contractor for those projects. Yet, we also realized there is value in offering our potential customers the expertise in the home design, custom modular construction, passive house design, and knowledge of the building process.

Weekly, we take calls from people who don't know where to start when it comes to building their dream home. They are looking for our knowledge in financing, how to apply for permits, and most importantly, how to design their new home. EcoCraft Homes can walk you through these processes, all while possibly saving you thousands of dollars! Our experience and knowledge allows us to educate you, the buyer, how to manage the project yourself!

As your home builder, EcoCraft Homes will provide you with a stress-free and successful new home building experience. One of the most important considerations when selecting your home builder is trust. We will insure that you are educated, have honest answers to your questions, and walk you through each step as you move forward in the process of designing and purchasing your new home.

As one of the few builders of eco-friendly, passive house design, residential custom modular homes, we realized that we need to be able to offer our product well outside of our local market. Remember, we will build the home, you only have to manage the project on site. The home can be totally customized, while building off site provides better construction, and quality management.

When building in a factory, the materials that are delivered to the construction facility are safely and securely stored in a protected warehouse to prevent damage or deterioration from moisture and the elements. EcoCraft Homes construction process is carefully engineered to create a sequence of steps that is repeated precisely on every module. The assembly line method decreases the possible variations in construction that occur with stick built homes. The automated processes within a modular factory are dedicated to creating high quality homes with inspections at each station. This eliminates poor site work decisions when a field manager is not overseeing the project. It also virtually eliminates complications that can regularly occur in the field for homes built with traditional construction.

The time of construction, the climate in which the home is built, and the management of the construction, all affect the overall cost of building a home. At EcoCraft Homes, we eliminate most of these factors, as we know the home will be under constant supervision, will have a specific timeline, and will be constructed in a controlled environment. And now, with the Buy Direct Program, we can seamlessly integrate the construction of your home with the management of your project on site.

If you would like an eco-friendly home with passive house design, but don't know where to start, we can help. We realize our specific product is in high demand, but not readily available to the general public in many markets. We can help you save money, custom design your home, and walk you through each step of your build.
